

# Cost-Volume-Profit Relationships

---

## Chapter Six

# Learning Objective 1

---

Explain how changes in activity affect contribution margin and net operating income.

# Basics of Cost-Volume-Profit Analysis

|                                                        |   |   |   |   |   |   |

|--------------------------------------|------------------|
| <b>Racing Bicycle Company</b>        |                  |
| <b>Contribution Income Statement</b> |                  |
| <b>For the Month of June</b>         |                  |
| Sales (500 bicycles)                 | \$ 250,000       |
| Less: Variables expenses             | 150,000          |
| Contribution margin                  | 100,000          |
| Less: Fixed expenses                 | 80,000           |
| Net income                           | <u>\$ 20,000</u> |

**CM is used first to cover fixed expenses. Any remaining CM contributes to net operating income.**

# The Contribution Approach

Sales, variable expenses, and contribution margin can also be expressed on a per unit basis. If Racing sells an additional bicycle, \$200 additional CM will be generated to cover fixed expenses and profit.

|                                                                                  | Total      | Per Unit |
| Sales (500 bicycles)                                                             | \$ 250,000 | \$ 500   |
| Less: Variables expenses                                                         | 150,000    | 300      |
| Contribution margin                                                              | 100,000    | 200      |
| Less: Fixed expenses                                                             | 80,000     |          |
| Net income                                                                       | \$ 20,000  |          |

# The Contribution Approach

Each month, Racing must generate at least **\$80,000** in total CM to break even.

# The Contribution Approach

---

We do not need to prepare an income statement to estimate profits at a particular sales volume. Simply multiply the number of units sold above break-even by the contribution margin per unit.

If Racing sells  
430 bikes,  
its net income  
will be \$6,000.

# Learning Objective 2

---

Prepare and interpret a  
cost-volume-profit (CVP)  
graph.

# CVP Relationships in Graphic Form

The relationship among revenue, cost, profit and volume can be expressed graphically by preparing a CVP graph. Racing developed contribution margin income statements at 300, 400, and 500 units sold. We will use this information to prepare the CVP graph.

|                                | Income<br>300 units | Income<br>400 units | Income<br>500 units |
|--------------------------------|---------------------|---------------------|---------------------|
| <b>Sales</b>                   | <b>\$ 150,000</b>   | <b>\$ 200,000</b>   | <b>\$ 250,000</b>   |
| <b>Less: variable expenses</b> | <b>90,000</b>       | <b>120,000</b>      | <b>150,000</b>      |
| <b>Contribution margin</b>     | <b>\$ 60,000</b>    | <b>\$ 80,000</b>    | <b>\$ 100,000</b>   |
| <b>Less: fixed expenses</b>    | <b>80,000</b>       | <b>80,000</b>       | <b>80,000</b>       |
| <b>Net operating income</b>    | <b>\$ (20,000)</b>  | <b>\$ -</b>         | <b>\$ 20,000</b>    |

# CVP Graph

# CVP Graph

# CVP Graph

# CVP Graph

# Learning Objective 3

Use the contribution margin ratio (CM ratio) to compute changes in contribution margin and net operating income resulting from changes in sales volume.

# Contribution Margin Ratio

The contribution margin **ratio** is:

$$\text{CM Ratio} = \frac{\text{Total CM}}{\text{Total sales}}$$

For Racing Bicycle Company the ratio is:

$$\frac{\$80,000}{\$200,000} = 40\%$$

Each \$1.00 increase in sales results in a total contribution margin increase of 40¢.

# Contribution Margin Ratio

---

Or, in terms of **units**, the contribution margin **ratio** is:

$$\text{CM Ratio} = \frac{\text{Unit CM}}{\text{Unit selling price}}$$

For Racing Bicycle Company the ratio is:

$$\frac{\$200}{\$500} = 40\%$$

# Contribution Margin Ratio

**A \$50,000 increase in sales revenue  
results in a \$20,000 increase in CM.  
( $\$50,000 \times 40\% = \$20,000$ )**

## Quick Check ✓

Coffee Klatch is an espresso stand in a downtown office building. The average selling price of a cup of coffee is \$1.49 and the average variable expense per cup is \$0.36. The average fixed expense per month is \$1,300. 2,100 cups are sold each month on average. What is the CM Ratio for Coffee Klatch?

- a. 1.319
- b. 0.758
- c. 0.242
- d. 4.139

# Learning Objective 4

---

Show the effects on  
contribution margin of  
changes in variable costs,  
fixed costs, selling price,  
and volume.

# Changes in Fixed Costs and Sales Volume

---

What is the profit impact if Racing can increase unit sales from 500 to 540 by increasing the monthly advertising budget by \$10,000?

# Changes in Fixed Costs and Sales Volume

**\$80,000 + \$10,000 advertising = \$90,000**

|-----------------------------------|--------------------------|
| Increase in CM (40 units X \$200) | \$ 8,000                 |
| Increase in advertising expenses  | 10,000                   |
| Decrease in net operating income  | <u><u>\$ (2,000)</u></u> |

# Change in Variable Costs and Sales Volume

---

What is the profit impact if Racing can use higher quality raw materials, thus increasing variable costs per unit by \$10, to generate an increase in unit sales from 500 to 580?

# Change in Variable Costs and Sales Volume

$$580 \text{ units} \times \$310 \text{ variable cost/unit} = \$179,800$$

Sales **increase** by \$62,000, fixed costs increase by \$15,000, and net operating income **increases** by \$2,000.

## Change in Variable Cost, Fixed Cost and Sales Volume

---

What is the profit impact if Racing (1) pays a \$15 sales commission per bike sold instead of paying salespersons flat salaries that currently total \$6,000 per month, and (2) increases unit sales from 500 to 575 bikes?

| 12                                                            |   |   |   |   |   |   |   |   |  |  |

|                                                                                  |                              |                                |
|----------------------------------------------------------------------------------|------------------------------|--------------------------------|
| Racing Bicycle Company<br>Contribution Income Statement<br>For the Month of June |                              |                                |
|                                                                                  | Current Sales<br>(500 bikes) | Projected Sales<br>(575 bikes) |
| Sales revenue                                                                    | \$ 250,000                   | \$ 287,500                     |
| Less: Variables expenses                                                         | 150,000                      | 181,125                        |
| Contribution margin                                                              | 100,000                      | 106,375                        |
| Less: Fixed expenses                                                             | 80,000                       | 74,000                         |
| Net income                                                                       | \$ 20,000                    | \$ 32,375                      |

Sales **increase** by \$37,500, variable costs **increase** by \$31,125, but fixed expenses **decrease** by \$6,000.

# Change in Regular Sales Price

---

If Racing has an opportunity to sell 150 bikes to a wholesaler without disturbing sales to other customers or fixed expenses, what price would it quote to the wholesaler if it wants to increase monthly profits by \$3,000?

# Change in Regular Sales Price

$$\begin{array}{rcl} \$ 3,000 \div 150 \text{ bikes} & = & \$ 20 \text{ per bike} \\ \text{Variable cost per bike} & = & \underline{300 \text{ per bike}} \\ \text{Selling price required} & = & \underline{\underline{\$ 320 \text{ per bike}}} \end{array}$$

$$\begin{array}{rcl} 150 \text{ bikes} \times \$320 \text{ per bike} & = & \$ 48,000 \\ \text{Total variable costs} & = & \underline{45,000} \\ \text{Increase in net income} & = & \underline{\underline{\$ 3,000}} \end{array}$$

# Learning Objective 5

---

Compute the break-even  
point in unit sales and  
sales dollars.

# Break-Even Analysis

---

Break-even analysis can be approached in two ways:

1. Equation method
2. Contribution margin method

# Equation Method

---

**Profits = (Sales – Variable expenses) – Fixed expenses**

**OR**

**Sales = Variable expenses + Fixed expenses + Profits**

**At the break-even point  
profits equal zero**

# Break-Even Analysis

Here is the information from Racing Bicycle Company:

|                                | <u>Total</u>                   | <u>Per Unit</u> | <u>Percent</u> |
|--------------------------------|--------------------------------|-----------------|----------------|
| <b>Sales (500 bikes)</b>       | <b>\$ 250,000</b>              | <b>\$ 500</b>   | <b>100%</b>    |
| <b>Less: variable expenses</b> | <b>150,000</b>                 | <b>300</b>      | <b>60%</b>     |
| <b>Contribution margin</b>     | <b>\$ 100,000</b>              | <b>\$ 200</b>   | <b>40%</b>     |
| <b>Less: fixed expenses</b>    | <b>80,000</b>                  |                 |                |
| <b>Net operating income</b>    | <b><u><u>\$ 20,000</u></u></b> |                 |                |

# Equation Method

We calculate the break-even point as follows:

$$\text{Sales} = \text{Variable expenses} + \text{Fixed expenses} + \text{Profits}$$

$$\$500Q = \$300Q + \$80,000 + \$0$$

Where:

**Q = Number of bikes sold**

**\$500 = Unit selling price**

**\$300 = Unit variable expense**

**\$80,000 = Total fixed expense**

# Equation Method

We calculate the break-even point as follows:

$$\text{Sales} = \text{Variable expenses} + \text{Fixed expenses} + \text{Profits}$$

$$\$500Q = \$300Q + \$80,000 + \$0$$

$$\$200Q = \$80,000$$

$$Q = \$80,000 \div \$200 \text{ per bike}$$

$$Q = 400 \text{ bikes}$$

# Equation Method

The equation can be modified to calculate the break-even point in sales dollars.

$$\text{Sales} = \text{Variable expenses} + \text{Fixed expenses} + \text{Profits}$$

$$X = 0.60X + \$80,000 + \$0$$

Where:

$X$  = Total **sales dollars**

0.60 = Variable expenses as a % of sales

\$80,000 = Total fixed expenses

# Equation Method

The equation can be modified to calculate the break-even point in sales dollars.

$$\text{Sales} = \text{Variable expenses} + \text{Fixed expenses} + \text{Profits}$$

$$X = 0.60X + \$80,000 + \$0$$

$$0.40X = \$80,000$$

$$X = \$80,000 \div 0.40$$

$$X = \$200,000$$

# Contribution Margin Method

---

The contribution margin method has two key equations.

$$\text{Break-even point in units sold} = \frac{\text{Fixed expenses}}{\text{CM per unit}}$$

$$\text{Break-even point in total sales dollars} = \frac{\text{Fixed expenses}}{\text{CM ratio}}$$

# Contribution Margin Method

Let's use the contribution margin method to calculate the break-even point in total sales dollars at Racing.

$$\text{Break-even point in total sales dollars} = \frac{\text{Fixed expenses}}{\text{CM ratio}}$$

$$\frac{\$80,000}{40\%} = \$200,000 \text{ break-even sales}$$

## Quick Check ✓

Coffee Klatch is an espresso stand in a downtown office building. The average selling price of a cup of coffee is \$1.49 and the average variable expense per cup is \$0.36. The average fixed expense per month is \$1,300. 2,100 cups are sold each month on average. What is the break-even sales in units?

- a. 872 cups
- b. 3,611 cups
- c. 1,200 cups
- d. 1,150 cups

## Quick Check ✓

Coffee Klatch is an espresso stand in a downtown office building. The average selling price of a cup of coffee is \$1.49 and the average variable expense per cup is \$0.36. The average fixed expense per month is \$1,300. 2,100 cups are sold each month on average. What is the break-even sales in dollars?

- a. \$1,300
- b. \$1,715
- c. \$1,788
- d. \$3,129

# Learning Objective 6

---

Determine the level of sales needed to achieve a desired target profit.

# Target Profit Analysis

---

The equation and contribution margin methods can be used to determine the sales volume needed to achieve a target profit.

Suppose Racing Bicycle Company wants to know how many bikes must be sold to earn a profit of \$100,000.

# The CVP Equation Method

**Sales = Variable expenses + Fixed expenses + Profits**

$$\text{\$500Q} = \text{\$300Q} + \text{\$80,000} + \text{\$100,000}$$

$$\text{\$200Q} = \text{\$180,000}$$

$$Q = 900 \text{ bikes}$$

# The Contribution Margin Approach

The contribution margin method can be used to determine that 900 bikes must be sold to earn the target profit of \$100,000.

$$\text{Unit sales to attain the target profit} = \frac{\text{Fixed expenses} + \text{Target profit}}{\text{CM per unit}}$$

$$\frac{\$80,000 + \$100,000}{\$200/\text{bike}} = 900 \text{ bikes}$$

## Quick Check ✓

Coffee Klatch is an espresso stand in a downtown office building. The average selling price of a cup of coffee is \$1.49 and the average variable expense per cup is \$0.36. The average fixed expense per month is \$1,300. How many cups of coffee would have to be sold to attain target profits of \$2,500 per month?

- a. 3,363 cups
- b. 2,212 cups
- c. 1,150 cups
- d. 4,200 cups

# Learning Objective 7

---

Compute the margin of  
safety and explain its  
significance.

# The Margin of Safety

The margin of safety is the excess of budgeted (or actual) sales over the break-even volume of sales.

$$\text{Margin of safety} = \text{Total sales} - \text{Break-even sales}$$

Let's look at Racing Bicycle Company and determine the margin of safety.

# The Margin of Safety

If we assume that Racing Bicycle Company has actual sales of \$250,000, given that we have already determined the break-even sales to be \$200,000, the margin of safety is \$50,000 as shown.

|                                | Break-even<br>sales<br>400 units | Actual sales<br>500 units |
|--------------------------------|----------------------------------|---------------------------|
| <b>Sales</b>                   | <b>\$ 200,000</b>                | <b>\$ 250,000</b>         |
| <b>Less: variable expenses</b> | <b>120,000</b>                   | <b>150,000</b>            |
| <b>Contribution margin</b>     | <b>80,000</b>                    | <b>100,000</b>            |
| <b>Less: fixed expenses</b>    | <b>80,000</b>                    | <b>80,000</b>             |
| <b>Net operating income</b>    | <b>\$ -</b>                      | <b>\$ 20,000</b>          |

# The Margin of Safety

The margin of safety can be expressed in terms of the number of units sold. The margin of safety at Racing is \$50,000, and each bike sells for \$500.

$$\text{Margin of Safety in units} = \frac{\$50,000}{\$500} = 100 \text{ bikes}$$

# The Margin of Safety

The margin of safety can be expressed as  
**20%** of sales.

$$(\$50,000 \div \$250,000)$$

|                                | Break-even<br>sales<br>400 units | Actual sales<br>500 units |
|--------------------------------|----------------------------------|---------------------------|
| <b>Sales</b>                   | <b>\$ 200,000</b>                | <b>\$ 250,000</b>         |
| <b>Less: variable expenses</b> | <b>120,000</b>                   | <b>150,000</b>            |
| <b>Contribution margin</b>     | <b>80,000</b>                    | <b>100,000</b>            |
| <b>Less: fixed expenses</b>    | <b>80,000</b>                    | <b>80,000</b>             |
| <b>Net operating income</b>    | <b>\$ -</b>                      | <b>\$ 20,000</b>          |

## Quick Check ✓

Coffee Klatch is an espresso stand in a downtown office building. The average selling price of a cup of coffee is \$1.49 and the average variable expense per cup is \$0.36. The average fixed expense per month is \$1,300. 2,100 cups are sold each month on average. What is the margin of safety?

- a. 3,250 cups
- b. 950 cups
- c. 1,150 cups
- d. 2,100 cups

# Cost Structure and Profit Stability

Cost structure refers to the relative proportion of fixed and variable costs in an organization.

Managers often have some latitude in determining their organization's cost structure.

# Cost Structure and Profit Stability

There are advantages and disadvantages to high fixed cost (or low variable cost) and low fixed cost (or high variable cost) structures.

An advantage of a high fixed cost structure is that income will be higher in good years compared to companies with lower proportion of fixed costs.

A disadvantage of a high fixed cost structure is that income will be lower in bad years compared to companies with lower proportion of fixed costs.

## Learning Objective 8

Compute the degree of operating leverage at a particular level of sales and explain how it can be used to predict changes in net operating income.

# Operating Leverage

A measure of how sensitive net operating income is to percentage changes in sales.

$$\text{Degree of operating leverage} = \frac{\text{Contribution margin}}{\text{Net operating income}}$$

# Operating Leverage

At Racing, the degree of operating leverage is 5.

|                                                                                   |                                   |
|-----------------------------------------------------------------------------------|-----------------------------------|
|  | <b>Actual sales<br/>500 Bikes</b> |
| <b>Sales</b>                                                                      | <b>\$ 250,000</b>                 |
| <b>Less: variable expenses</b>                                                    | <b>150,000</b>                    |
| <b>Contribution margin</b>                                                        | <b>100,000</b>                    |
| <b>Less: fixed expenses</b>                                                       | <b>80,000</b>                     |
| <b>Net income</b>                                                                 | <b>\$ 20,000</b>                  |

$$\frac{\$100,000}{\$20,000} = 5$$

# Operating Leverage

With an operating leverage of 5, if Racing increases its sales by 10%, net operating income would increase by 50%.

|                                     |                   |
|-------------------------------------|-------------------|
| <b>Percent increase in sales</b>    | <b>10%</b>        |
| <b>Degree of operating leverage</b> | <b>×      5</b>   |
| <b>Percent increase in profits</b>  | <b><u>50%</u></b> |

**Here's the verification!**

# Operating Leverage

|                               | Actual sales<br>(500) | Increased<br>sales (550) |
|-------------------------------|-----------------------|--------------------------|
| <b>Sales</b>                  | <b>\$ 250,000</b>     | <b>\$ 275,000</b>        |
| <b>Less variable expenses</b> | <b>150,000</b>        | <b>165,000</b>           |
| <b>Contribution margin</b>    | <b>100,000</b>        | <b>110,000</b>           |
| <b>Less fixed expenses</b>    | <b>80,000</b>         | <b>80,000</b>            |
| <b>Net operating income</b>   | <b>\$ 20,000</b>      | <b>\$ 30,000</b>         |

**10% increase in sales from  
\$250,000 to \$275,000 . . .**

**. . . results in a 50% increase in  
income from \$20,000 to \$30,000.**

## Quick Check ✓

Coffee Klatch is an espresso stand in a downtown office building. The average selling price of a cup of coffee is \$1.49 and the average variable expense per cup is \$0.36. The average fixed expense per month is \$1,300. 2,100 cups are sold each month on average. What is the operating leverage?

- a. 2.21
- b. 0.45
- c. 0.34
- d. 2.92

## Quick Check ✓

At Coffee Klatch the average selling price of a cup of coffee is \$1.49, the average variable expense per cup is \$0.36, the average fixed expense per month is \$1,300 and an average of 2,100 cups are sold each month.

If sales increase by 20%, **by** how much should net operating income increase?

- a. 30.0%
- b. 20.0%
- c. 22.1%
- d. 44.2%

# Learning Objective 9

Compute the break-even point for a multiproduct company and explain the effects of shifts in the sales mix on contribution margin and the break-even point.

# The Concept of Sales Mix

---

- Sales mix is the relative proportion in which a company's products are sold.
- Different products have different selling prices, cost structures, and contribution margins.

Let's assume Racing Bicycle Company sells bikes and carts and that the sales mix between the two products remains the same.

# Multi-product break-even analysis

Racing Bicycle Co. provides the following information:

|                                                               |    |                      |            |      |            |      |            |        |   |   |   |   |   |   |

# Key Assumptions of CVP Analysis

---

- ① Selling price is constant.
- ② Costs are linear.
- ③ In multiproduct companies, the sales mix is constant.
- ④ In manufacturing companies, inventories do not change (units produced = units sold).
